## **Flanged Check Valve**

The series DBF rubber check valve effectively ensures monodirectional flow of slurries, sewerage, sludge and other hard to handle fluids.

The valve consists of an elastomer duckbill with a flanged connection. The back up flange is galvanized carbon steel, with 304 or 316 stainless steel as options. This simple rugged design eliminates the mechanical parts which can wear and jam in conventional check valves. They are available in a variety of elastomers.

All dimensions are in inches. Weights are in Lbs.
